

Mr. Rama Krishna Aditya Bharadwaj Kolluri, MSc

Doctoral Researcher | Business Intelligence Manager | Mechatronics Engineer

Headline

Doctoral Researcher (AI-Driven Maintenance for Solar Minigrids) at Birmingham City University | Business Intelligence Manager at ECAM Engineering | Mechatronics Engineer

About

Mechatronics engineer working at the intersection of manufacturing, data, and AI.

I am Business Intelligence Manager at ECAM Engineering, where I lead data optimisation from shop-floor operations to strategic planning — improving operational efficiency, identifying growth opportunities, and supporting long-term competitiveness through analytics and AI.

I am also a Doctoral Researcher at Birmingham City University, researching AI-driven maintenance optimisation for solar minigrids under the UKRI EPSRC Ayrton Challenge programme. My interests include predictive maintenance, digital twins, and energy access in off-grid contexts.

I hold an MSc in Mechatronics and Intelligent Machines (Distinction) from the University of Central Lancashire. Previously, as a Knowledge Transfer Partnership Associate between ECAM Engineering and Birmingham City University, I led a digitalisation project for a precision engineering firm — covering data collection, analysis, platform selection, and the development of proprietary business software. Earlier, as a Graduate Project Engineer at the University of Central Lancashire, I worked on software development, automated testing, data analysis, and synthetic-dataset generation (Python/Selenium) for ARIMA time-series forecasting. I also completed an Erasmus+ research placement on autonomous-vehicle mobility at the Arab Academy for Science, Technology and Maritime Transport.
